

Introduction to Sino-Tibetan Linguistics

Scott DeLancey, Department of Linguistics,
University of Oregon

delancey@uoregon.edu

<https://uoregon.academia.edu/ScottDeLancey>

Outline of the lectures

- 1 The Sino-Tibetan languages: Typology, subgrouping; Outline of the lectures
- 2 Sino-Tibetan noun phrases and nominalization
- 3 Syntactic features of Bodo: Verb serialization, Information management
- 4 Historical development of Tibetan: The Classical and Modern Tibetan verb
- 5 Verbal categories in Tibetan: Tense/Aspect/Modality/Evidentiality
- 6 Verb agreement in Tibeto-Burman languages
- 7 Comparative morphology and Sino-Tibetan
- 7 Wrap up

Sino-Tibetan (Trans-Himalayan)

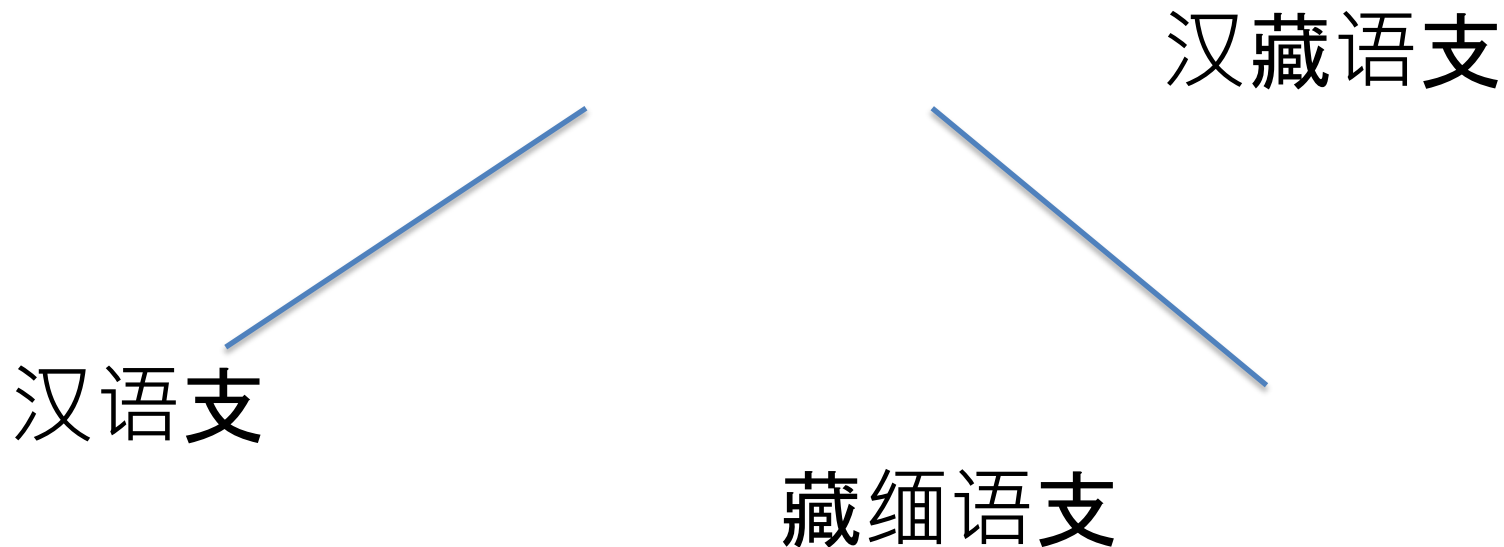

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

汉藏语支

藏缅语支

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

We used to think that Sino-Tibetan divides into two main branches, Sinitic and Tibeto-Burman:

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

This is probably wrong.

A branch of a family must be a genetic unit: it must include all and only the languages which descend from a common ancestor.

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

A branch of a family must be a genetic unit: it must include all and only the languages which descend from a common ancestor.

Sinitic is a genetic unit: All Chinese languages descend from a common ancestor, Old Chinese.

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

A branch of a family must be a genetic unit: it must include all and only the languages which descend from a common ancestor.

Sinitic is a genetic unit: All Chinese languages descend from a common ancestor, Old Chinese.

And no Tibeto-Burman language is descended from Old Chinese.

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

A branch of a family must be a genetic unit: it must include all and only the languages which descend from a common ancestor.

“Tibeto-Burman” is not a genetic unit. The common ancestor of all Tibeto-Burman languages is also the ancestor of Old Chinese.

Sino-Tibetan, Tibeto-Burman, Trans-Himalayan

“Tibeto-Burman” is not a genetic unit. The common ancestor of all Tibeto-Burman languages is also the ancestor of Old Chinese.

For this reason Professor van Driem has suggested replacing the term “Sino-Tibetan” with a new name: **Trans-Himalayan**

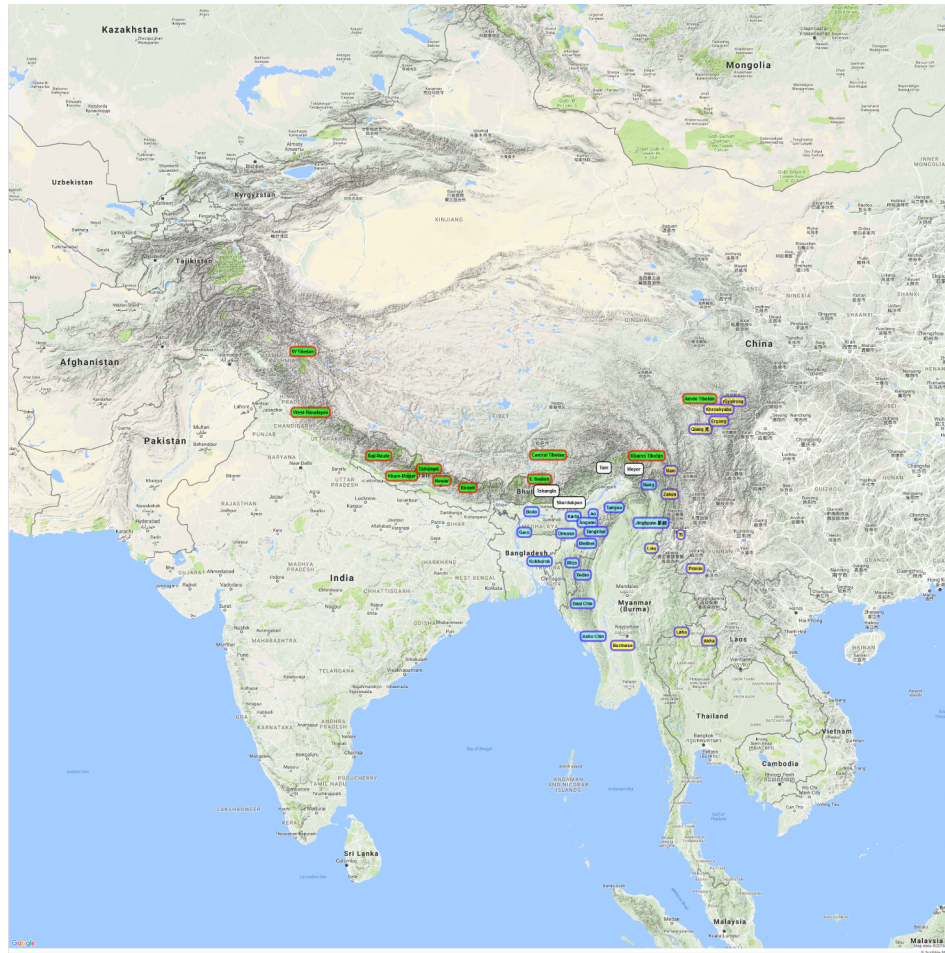

Classifying Trans-Himalayan

- We do not yet understand how all the languages of the family are related to each other
- Current classifications by Matisoff, 孙宏开, Bradley, Thurgood, and others do not agree

Classifying Trans-Himalayan

- I suggest 3 major branches: Eastern, Central, Western
- Some languages of the China-India border region are still unclassified
- Chinese may belong to the Eastern branch, but some scholars (for example van Driem) think it is closer to Tibetan, in the Western branch

Classifying Trans-Himalayan

Classifying Trans-Himalayan

Eastern Branch

Qiang-rGyalrong

rGyalrongic: rGyalrong, Horpa, Lavrung,
etc.

Qiang

Na: Naxi, Mosuo

Radical analyticity in Sinitic

Mandarin

Aspect suffixes:

-le	change of state	< 'finish'
-zhe	persistent activity	
-guo	experiential	< 'cross'

Radical analyticity in Sinitic

Mandarin

Deictics:

-qu 'go'

-lai 'come'

Radical analyticity in Sinitic

Mandarin

Directionals:

-shang	‘ascend’
-xia	‘descend’
-jin	‘enter’
-chu	‘exit’

Radical analyticity in Sinitic

Mandarin

And that's it

Archaic and Creoloid

- Archaic type:
 - Robust paradigmatic verb morphology, including hierarchial argument indexation paradigms based on inherited PTH material
 - Complex morphophonology, rampant irregularity
- Creoloid
 - Some syntagmatic complexity -- unstructured sequences of transparent verbal operators, grammatical forms cognate only at very shallow levels
 - Little morphophonology, all simple and transparent; no irregularity

History of the typological patterns

- Japhug shows the original PTH typology, and retains most of the original morphology
- The creoloid typology seen in Boro originates in intense contact
- The Sinitic typology is shared with Mainland Southeast Asian languages through intense contact

Time Depths

- Sinitic 3,000+
- Lolo-Burmese 2,000+
 - Han Dynasty *Pailang Songs*
- Bodo-Garo 2,000+
 - Probable reference in *Mahabharata*

Time Depths

The radically analytic structure of Sinitic and the transparent agglutinative structure of Lolo-Burmese and Bodo-Garo have been stable over at least two thousand years.

Time Depths

The radically analytic structure of Sinitic and the transparent agglutinative structure of Lolo-Burmese and Bodo-Garo have been stable over at least 2 thousand years.

The archaic morphologically complex structure of rGyalrong and Kiranti has been stable since the beginning of the family, at least 4 or 5 thousand years.

Typology

- Archaic complex structure is preserved in the mountains, in languages which are not learned by other groups
- Simpler structure develops when one group of people conquer neighboring groups, and those groups learn the language imperfectly

Outline of the lectures

- 1 The Sino-Tibetan languages: Typology, subgrouping; Outline of the lectures
- 2 Sino-Tibetan noun phrases and nominalization
- 3 Syntactic features of Bodo: Verb serialization, Information management
